

# QSG114: CPT007B SLEX8007A Kit Quick-Start Guide

The CPT007B SLEX8007A kit is designed to showcase the various touch features of the CPT007B GPIO Capacitive Sense devices.

The device features capacitive sensing input engine with 7 inputs, buzzer feedback, mutually exclusive touch qualifier, capacitive proximity sensing input and other features, making it ideal for many capacitive touch applications.

## KIT CONTENTS

- CPT007B Capacitive Sense Evaluation Board
- 1 x mini USB cable
- 1 x acrylic overlay
- Getting Started card

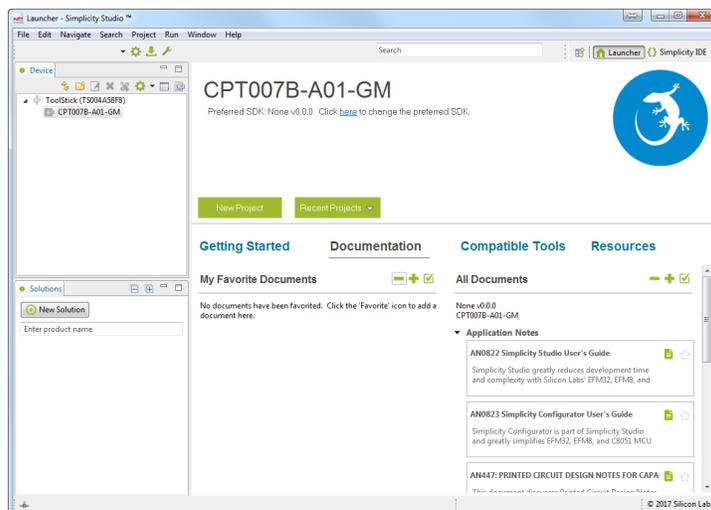

## 1. Getting Started

### Install Simplicity Studio

Simplicity Studio is a free software suite needed to start developing your application. The various features of the device can be visualized using some of the inbuilt tools provided by the software. Download the latest version of Simplicity Studio from the Silicon Labs website:

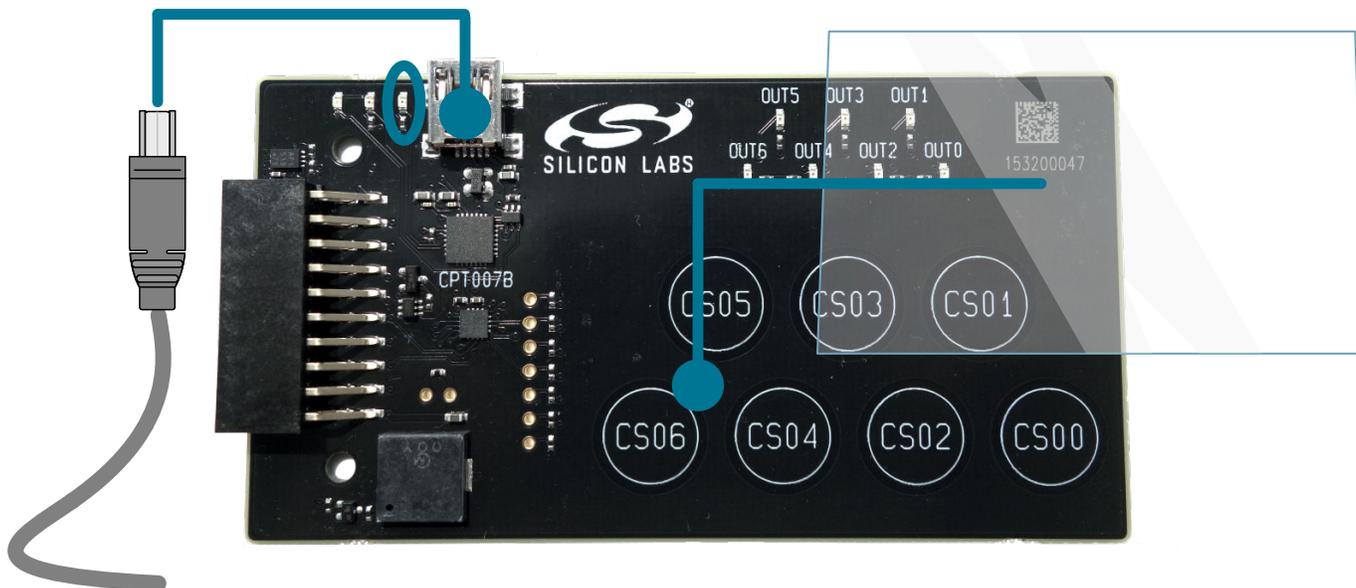

<http://www.silabs.com/simplicity-studio>

**Note:** The board comes pre-loaded with a default configuration that provides buzzer feedback when the capacitive sensing buttons are pressed.

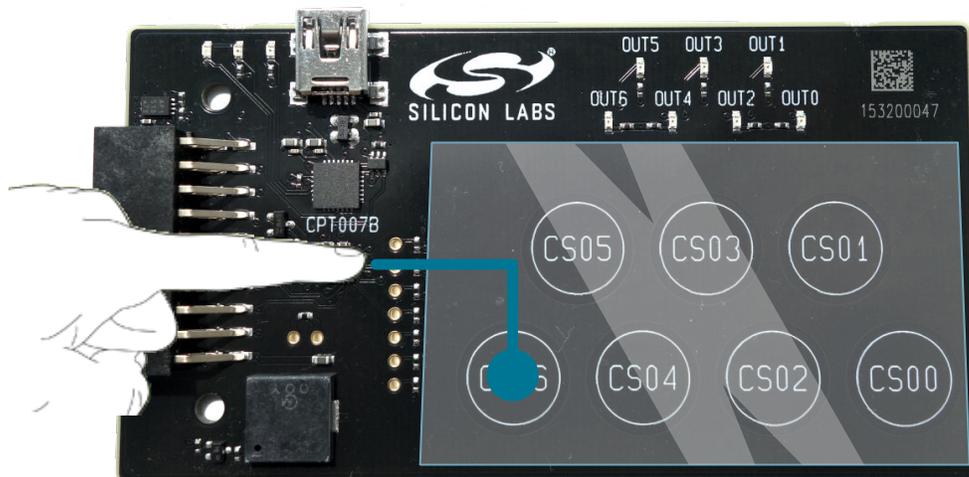

### Set Up Your Kit

1. Provide power to the board by connecting the DBG USB connector to the PC using the provided USB cable. When a connection has been established successfully, the LED (marked in the picture) lights up.
2. Place the acrylic overlay on the board over the capacitive sense pads.

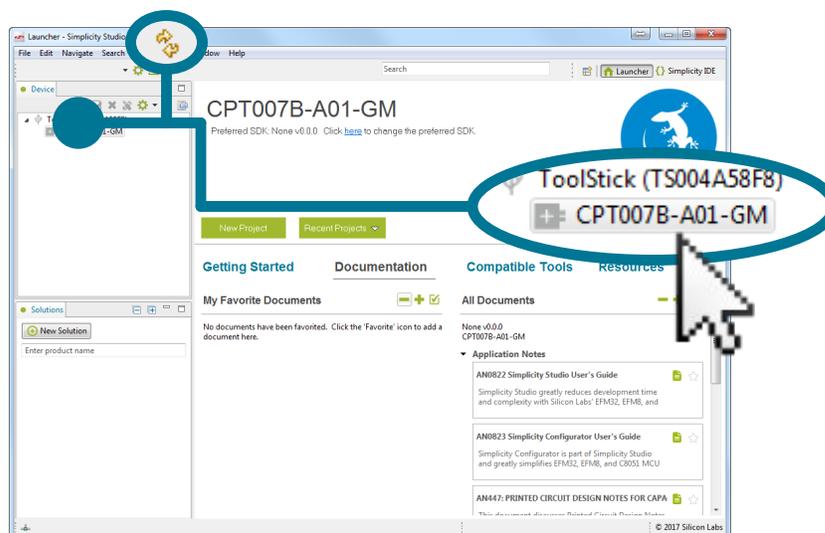

## Use the Capacitive Sensing Buttons

1. Place a finger on any one of the buttons: CS00, CS01, ..., CS06.
2. The buzzer activates each time any of the capacitive buttons are pressed.
3. LEDs OUT0, OUT1, ..., OUT6 will light up corresponding to the button pressed.
4. For example, the OUT6 LED lights up and the buzzer activates when the CS06 button is pressed.

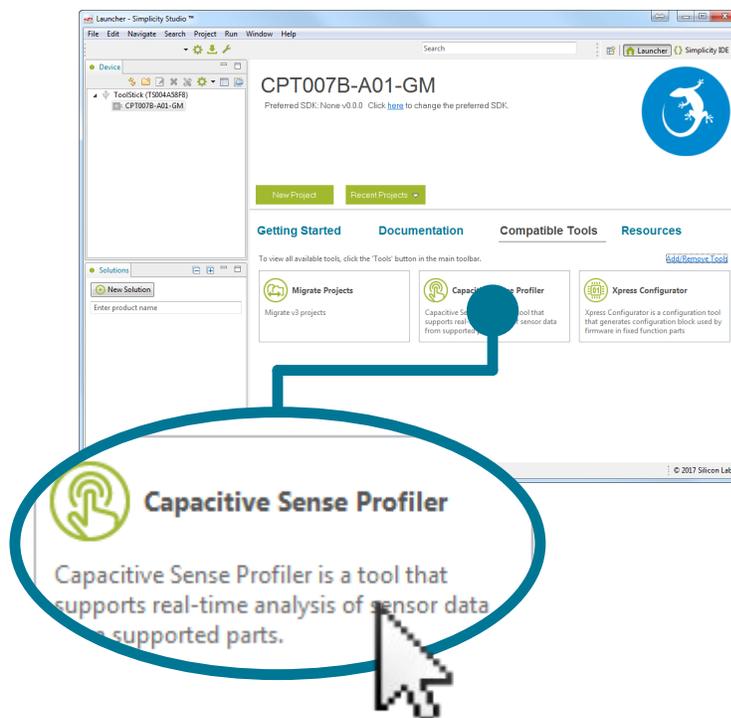

## Detect Your Device

1. Click the **[Refresh]** button in the **[Device]** area. The board may take some time to appear due to driver installations for the debug adapter.
2. Click the **[CPT007B]**. This will verify that the installation was successful, identify the TouchXpress device on the hardware, and automatically configure the software tools for use with your device.

## View the Capacitive Sensing Data

1. Click **[Capacitive Sense Profiler]** under **[Compatible Tools]** in Simplicity Studio.

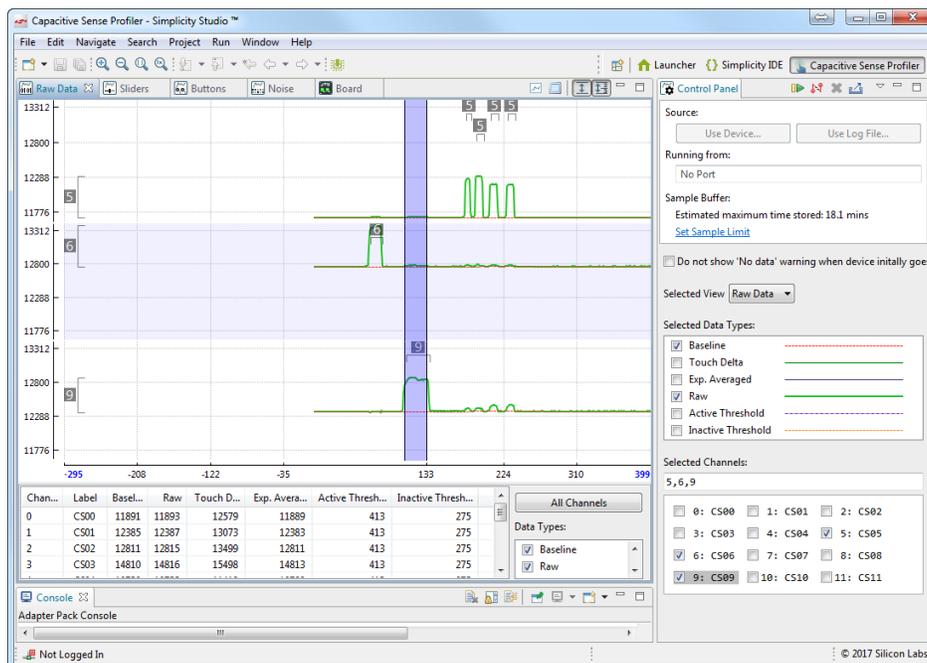

**Note:** The User Guide for the CPT007B SLEXP8007A board contains more information about interfacing the device with other MCUs, using the **[Xpress Configurator]** for simple configurations, and other features.

## Touch and Visualize

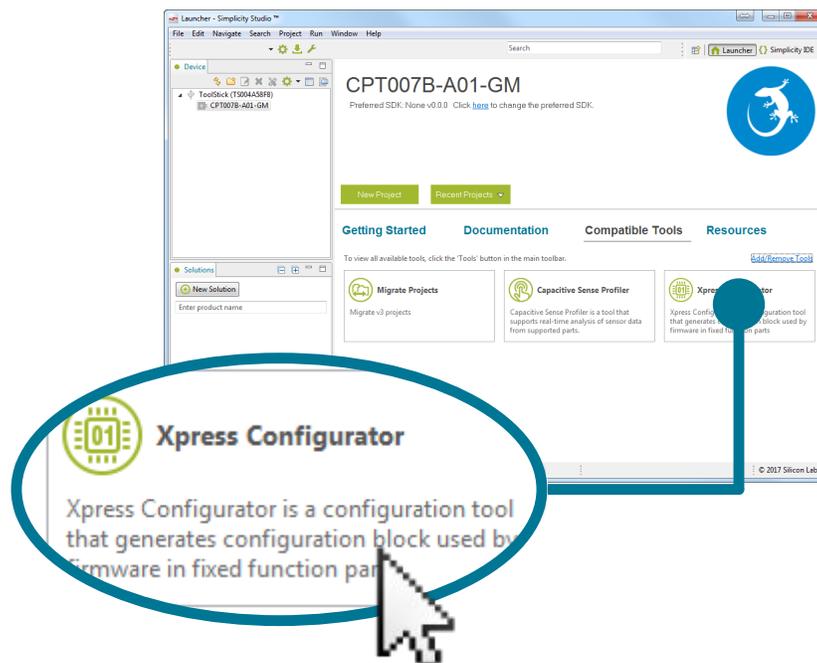

The [Capacitive Sense Profiler] indicates touches, raw and processed data, and noise information in a simple-to-use GUI.

1. Touch and release any of the capacitive sensing buttons on the board. The profiler will display the measured raw data, touch detection points, and baseline.

## Change the Device Configuration

Based on the performance of the device in [Capacitive Sense Profiler], change the capacitive sense input configuration using [Xpress Configurator] in the [Compatible Tools] area.

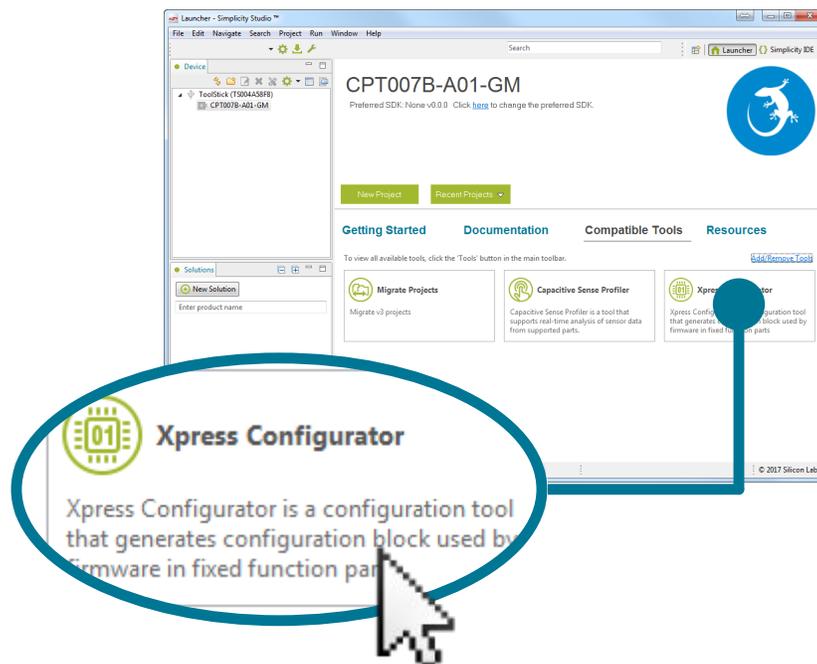

## Utilize the Available Resources

The next section includes additional resources available for the device, including software examples, documentation, and application notes.

## 2. Resources

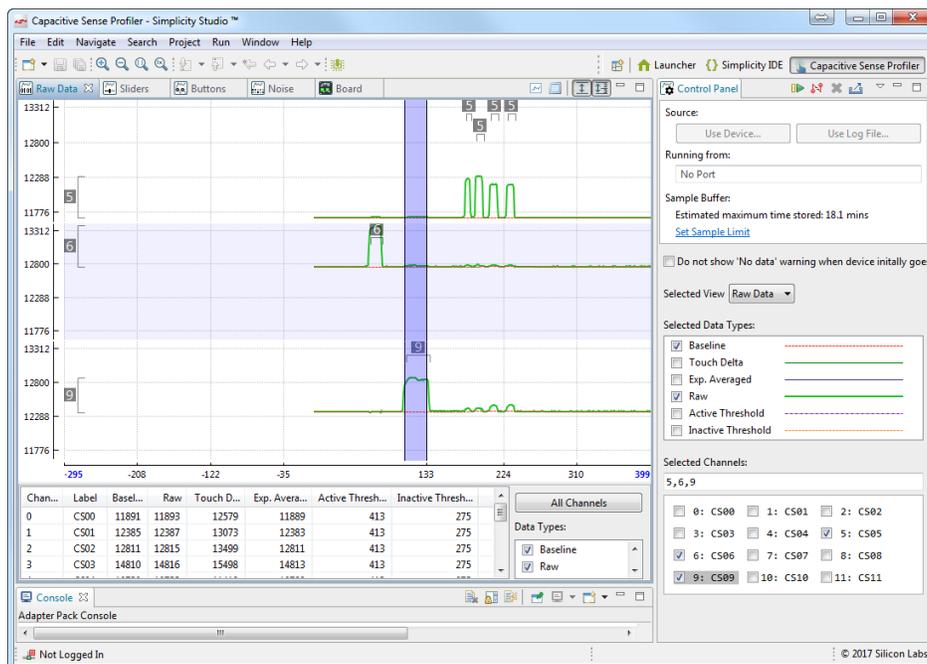

### Xpress Configurator

The capacitive sense inputs can be configured for different thresholds, debounce counter values, scan periods, gain, scanning methods, touch time-outs, and touch exclusiveness by using **[Xpress Configurator]** in the **[Compatible Tools]** area.

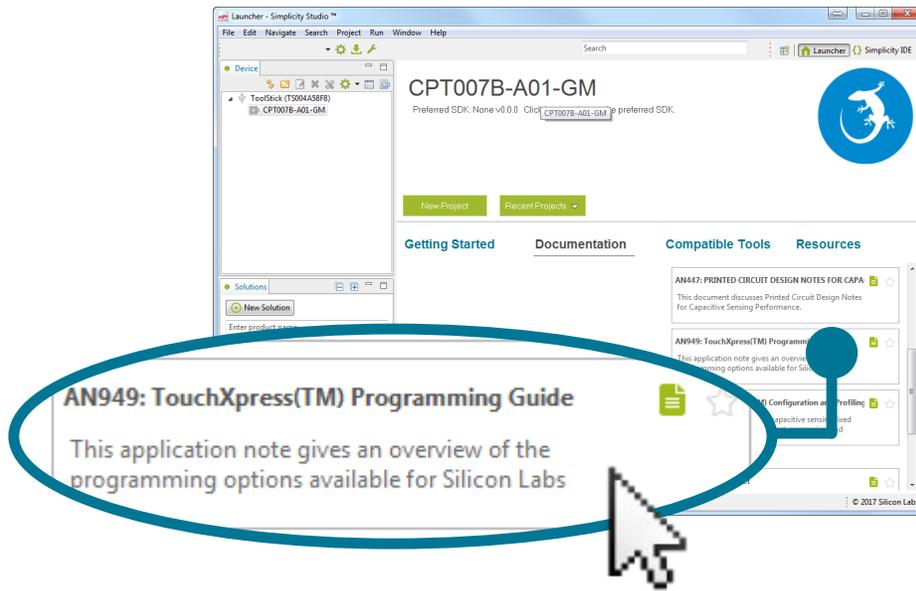

### Capacitive Sense Profiler

View touch data from the device and analyze the capacitive sensing system using **[Capacitive Sense Profiler]** in the **[Compatible Tools]** area.

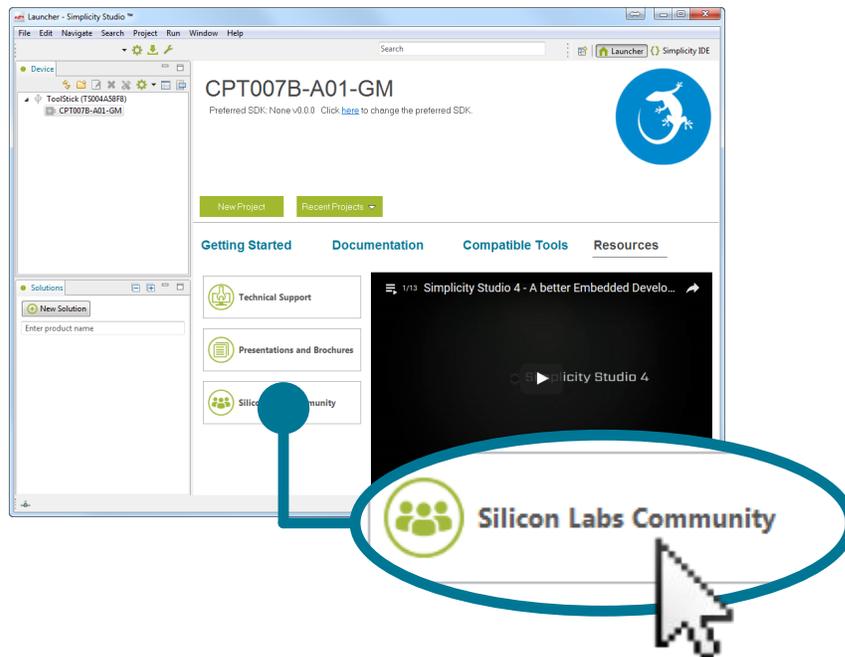

## Documentation

All documents related to the device can be found in the **[Documentation]** area, including device data sheets, kit user guides, and application notes. The User's Guide will be a valuable document to reference while using the device.

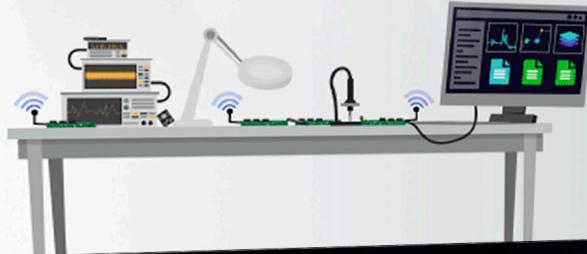

## Community and Support

Have a question? Visit the community by clicking the **[Community]** link in the **[Resources]** area.
